

Reduce downtime;
increase throughput of moulds

Minimize defects; flexible and conformable

Wider temperature range;
optimum performance and mould protection

Less cleanup; no adhesive residue

WIND TURBINES

Production of wind blades in composite moulds for clean energy

Our products including **GR6 Tape** help wind turbine blade manufacturers produce advanced composite blades by minimizing turn around time and by maximizing the number of moulds between release changes unlike standard release fabrics and agents. For more information about Green Belting Industries PTFE products, please contact your Green Belting Industries representative or call our customer service department.
